November 12, 2020
CM/HR/20201112

Shri Manohar Lal Khattar,
Hon'ble Chief Minister of Haryana,

Requesting you to release public web based dashboard to view pollution status, action taken to handle pollution, planning to handle pollution, forecast and advisory related to pollution.

As you are already aware, everybody is impacted by the past and the current situation of air pollution that we are facing around us. There is no need to highlight it.

Through this letter, we are proposing you to setup a public dashboard where we can find out what exactly is happening around us. It should have at least following features for better results:

1. **Forecast and advisory** at state and inter-state level
    - Pollution related forecast and advisory to be issued as and when required.
2. **Planning** at state and inter-state level
    - This section should showcase all the planning to manage pollution issue, both in short term as well as in long term like:
        - For short term, it should showcase plan to handle pollution in coming 15 days, coming month, coming 6 months. It should be updated every fortnight.
        - For long term, it should show plan for next 1 year, 5 years and next 10 years.
3. **Steps taken** to handle pollution situation at state and inter-state level
    - This section should be updated every fortnight and we as citizens should be able to see all the date-wise steps taken by government since your tenure started.
4. **Reports** at state level
    - Current pollution level in detail like current status, minimum and maximum value etc.
    - Historical pollution level and statistics in detail like pollution level on same date last year, change in pollution since last year etc.
    - Detail about all the air pollution sensors present like their location, status, technical details etc.

We request this system to be managed from your office to ensure best results. It will also showcase your interest in this issue. We would like to share a prototype and discuss further details with you for an efficient solution of this issue.

We can simply say it is the most urgent issue and we cannot wait more.

With warm regards and hope,
ekMorcha
